

CARP

Juvenile

Grower

The **Carp** diet program is designed on how would allow for optimal formulation for the level of intensity of your cultivation.

Carp is the most popular and most famous freshwater fish for fishing in our region. The activity of carp is related to water temperature, namely, if the water is cold, the carp limits its food activity and movement, and thus consumes less energy.

Carp meat is firm and light in color, rich in omega - 3 fatty acids and vitamin B12. From minerals contains the most phosphorus and selenium, and contains a high proportion of protein and a small proportion of fat. It's food available for cultivation in a nutrient ratio from starter 38/10, to grower 30/10; 32/8; 35/8; 32/8, to best fit super intense RAS system (recirculation breeding system) of the pond of lower intensity.

All our food contains the highest quality raw materials high digestibility, the highest quality proteins with a high biological value that encourage healthy growth and development of carp.

Carp

STAGE	NAME	Protein (Min%)	Fat	Fibers (Max%)	Moisture (Max%)	Ash (Max%)	Phosphorus (Max%)	Floating	Slow sinking	Sinking	Size mm	DESCRIPTION
Juvenile	Carp 32/10	38	10	1,5	10	7	1,8			●	4	Improved high-energy food with a special formula for the transition from Starter to Juvenile
	Carp 32/10	32	10	3	10	7	1			●	4,5	A complete food, a very effective fishmeal-based diet designed to feed a variety of omnivorous and carnivorous fish with moderate protein needs. Designed for RAS systems (recirculation systems)
Grower	Carp 35/8	35	8	3	10	6	1			●	6	Food-based on high-efficiency plant proteins, specially formulated for carp farming in intensive recirculation systems. It has a uniform amino acid formulation and is highly digestible, resulting in low pollution.
	Carp 32/8	32	8	3	10	6	1			●	9,11	Designed for RAS systems (recirculation systems). Designed for ponds and cage systems

SUSTAINABLE AND TRACEABLE

- Use of renewable vegetable proteins and oils
- Inclusion of fish by-products from human food processing
- Fish meal and fish oil substitutes
- The use of natural, bioactive compounds to improve animal health and further reduce the need for farms to use chemicals and antibiotics
- Maximize the use of locally available ingredients

PACKING

Bags

For certain pellet sizes and packaging information, contact Agrinatura doo

FEATURES AND ADVANTAGES

- Formulated to maximize growth and reduce visceral fat deposition in species that do not use fats to save protein.
- Selection of ingredients based on testing the digestibility of real fish.
- Balanced amino acid profile.
- Phosphorus levels below 1.2%.
- Meets FDA requirements regarding restrictions on mammalian protein sources.

INGREDIENTS

A strict raw material procurement program keeps our suppliers on higher standards with pre-established specifications, site visits, and ingredient testing. This careful monitoring, record keeping, and quality control continue through the supply chain. Agrinatura products satisfy the range standards and are produced in a plant that uses: a quality management system registered ISO 9001: 2008. Except moreover, Agrinatura meets the requirements it has set the US Food and Drug Administration (FDA), USA.

PRODUCT STORAGE INSTRUCTIONS

- Store in a cool, dry place away from the sunlight
- Check the packaging on the dates produced
- Rotate the stock to use the oldest one first
- product ("first in, first out" principle)
Remove the plastic wrap to extend product life
